Skills & Qualifications

- ✔️7+ Years experience as a DevOps ♾Engineer .
- ✔️Certified Kubernetes ☸ Administrator.
- ✔️Self starter and relentless learner 📚.
- ✔️Loves writing code in Python 🐍
- ✔️Lives in the Terminal 👨🏾‍💻.
- ✔️7+ years of experience with Cloud ☁️.
- ✔️Well versed with GitOps and IaC.

Tech stack

Linux | Python(Proficient), Golang(beginner), Groovy(Jenkins) | AWS, GCP

Terraform, Ansible | Jenkins, Gitlab CI | Kubernetes, Nomad, Docker

Prometheus, Grafana, Loki | Blockchain Nodes

Work History

🚧Project: Tatum | Blockchain Platform | Cloud DevOps Engineer

06/2022 - Present

As part of the infrastructure team managed the underlying blockchain nodes and the associated Tatum framework through GitOps principles and "everything-as-code" approach.

- Became proficient in handling various blockchain nodes - ETH, BTC, Solana, BSC, Polygon, etc.
- Gained experience working with GCP, OVH infrastructure using Terraform and Ansible.
- Gained experience with Hashicorp Nomad running and managing the Blockchain nodes deployed on Nomad.
- Worked with a globally distributed team.

🚧Project: BlueHR | EHR Platform | Senior DevOps Engineer

02/2021 - 05/2022

As the sole DevOps engineer created the infrastructure through IaC and introduced and implemented CICD.

- Introduced DevOps practices like Gitflow branching strategy, peer reviews, CICD and IaC.
- Implemented CICD pipelines on highly available Jenkins deployed on Kubernetes and configured it using JCasC plugin.

- Configured Prometheus, Grafana and Loki to monitor the infrastructure.
- Mentored junior engineers to be productive members of the team.

🚧 Project: cxLoyalty | Loyalty Platform | DevOps Engineer

07/2019 - 01/2020

As a DevOps engineer I was responsible for helping my client to migrate their containerized applications to kubernetes and analyze tools and technologies in the kubernetes echosystem by conducting POCs.

- Quickly did a prototype resiliency testing using chaos-toolkit.
- Did a POC on using Consul KV store as a sidecar for managing application conguration with hot reload.
- Wrote a python script to verify the health status of the components in the kubernetes cluster everytime a new one is deployed or updated, using python client for kubernetes.

🚧 Project: MedLearn | eLearning Platform | DevOps Engineer .

08/2016 - 06/2019

As an organization new to DevOps, I was part of the team introducing and implementing DevOps practices.

As someone new to DevOps myself, I learned all the necessary tools and technologies like Jenkins/Groovy, Docker, Kubernetes, AWS, CloudFormation, Agile/DevOps philosophy and practices and proved my credentials as a quick learner.

- Implemented CI/CD pipelines usng Jenkins declarative Groovy/DSL.
- Configured, created and maintained - devlopment, QA, Staging and Production Kubernetes clusters in AWS.

- Configured, created and maintained associated cloud resources like Lambdas, Cloudfront sites, RDS, EMR clusters, etc in AWS.
- Mentored junior engineers to be productive members of the team.

🚧**Project: ezMARC | MetaData Serializing Tool | Software Engineer**

10/2015 - 07/2016

As a Backend engineer I developed a Python/Flask API to convert metadata of books to MARC records.

- As a fresher, designed and implemented ezmarc.com along with another team mate.
- Developed a Python/Flask API to convert metadata of books to MARC records.
- Tried pair programming along with another colleague while developing this app.
- Had fun using Python's various functional programming features to develop this api.

Hobbies

◎ Likes to play chess ♖.

◎ Reads about tech - practices, tools, trends.

◎ Loves riding my 🏍️Husqvarna Svartpilen.

◎ Learn new programming languages - currently learning Elixir.
