CERTIFICATIONS

Certified Kubernetes
Administrator

§ SUMMARY

Platform engineer running production infrastructure at **Tatum** — 50+ stateful workloads across two GCP regions plus OVH bare-metal, GitOps end-to-end. Comfortable from L7 routing down to storage-layer recovery and stateful upgrades.

8+

YEARS INFRA

GCP · AWS

+ BARE-METAL

§ EXPERIENCE

Cloud Platform

2022-06 → present

Engineer

Tatum.io · Blockchain-as-a-Service

Co-owner of the production infrastructure surface — workload orchestration, ingress, observability, GitOps.

- **scale** Operate 50+ stateful workloads across GKE in two GCP regions and OVH bare-metal via Ansible/Docker.
Domain: blockchain RPC nodes — EVM and UTXO families.
- **routing** Contributed to migration of platform-API and chain-RPC admission from nginx-Lua to Envoy Gateway (Gateway API HTTPRoute + SecurityPolicy + extAuth), preserving SLO budget through cutover.
- **gitops** Authored progressive multi-region rollout patterns on ArgoCD ApplicationSets (RollingSync, ignoreDifferences, branch retargeting) and the runbooks for their failure modes.
- **discovery** Designed Consul-based unified service discovery across K8s + Nomad + bare-metal — 60 members, 200+ service endpoints.
- **tools** Built the internal tooling layer: vitals snapshot CLI, dashboards-as-code workflow, snapshot-based rollback for stateful upgrades, MR-review knowledge base.

Senior DevOps

2021-02 → 2022-05

Engineer

BlueEHR · Healthcare EHR

Sole DevOps engineer. Took the platform from no-CI-no-monitoring to a working IaC and observability foundation. AWS-native stack.

- **ci/cd** HA Jenkins on Kubernetes via JCasC; Gitflow, peer review, and IaC introduced as engineering practice.
- **o11y** Prometheus + Grafana + Loki — first real observability the team had.

Software / Infrastructure

2020-01 → 2021-02

Engineer

Freelance · short-term engagements

Short-term contract engagements across cloud and DevOps work — exploratory period between full-time roles.

DevOps

2019-07 → 2020-01

Engineer

InfraCloud Technologies · Consulting

None

- **chaos** Resiliency testing with chaos-toolkit; Consul KV sidecar POC for hot-reload configuration.
- **k8s** Python tooling against the Kubernetes API for cluster-component health verification on deploy.

DevOps Engineer

2016-08 → 2019-06

[Impelsys India](#)

Part of the team introducing DevOps practices org-wide. Jenkins/Groovy, Docker, Kubernetes, AWS, CloudFormation. Owned critical CI/CD migrations end-to-end.

Software Engineer

2015-10 → 2016-07

[Impelsys India](#)

Built ezmarc.com with a teammate — a Python/Flask API converting book metadata to MARC records.

§ TECH STACK

CLOUD

GCP AWS OVH bare-metal

ORCHESTRATION

Kubernetes Nomad Docker

IAC / GITOPS

Terraform Ansible ArgoCD Helm
Kustomize

ROUTING

Envoy Gateway nginx Consul
GCP Global LB

OBSERVABILITY

Prometheus Grafana Loki SLOs

CI

GitLab CI Jenkins (JCasC)
GitHub Actions

LANGUAGES

Python Bash Go Groovy

STORAGE

ZFS snapshots GCP PD / CSI
stateful upgrade workflows

DOMAIN EXPERIENCE

Blockchain infrastructure — EVM (Erigon, Geth, Bor), Bitcoin, Solana, BSC, Polygon, Cosmos. The skills above generalize; the substrate happens to be chains.

§ PROJECTS

2015 • Python /
Flask / MARC

ezmarc.com

Co-designed and shipped as a fresher — a Python API converting book metadata into MARC library records.

2025- • Claude Code
skills, memory
systems, ft bookmarks
classifier

LLM-assisted internal tooling

Custom skills and memory persistence for a working developer; X/Twitter bookmarks classifier (ft) for personal knowledge management.

§ CREDENTIALS

Certified Kubernetes Administrator

CKA • The Linux Foundation
